

PRESS RELEASE

The County has partnered with Alleghenies Broadband, Inc., and consultant, the Foresite Group, on a high-speed internet connection evaluation project. The goal of the project is to determine the County's households and businesses internet connection for reliability and availability. Foresite has developed an online survey in which they are asking Blair County citizens to participate in. The survey includes a speed test, which will help determine if there is reliable internet service. The survey and speed test should be completed from your home computer for the most useful results. In the event you do not currently have home internet service, you can complete the survey and speed test from a cell phone or other available internet source.
